

SAFEGUARDING IN MARTIAL ARTS

SAFE PRACTICE POLICY

NAME OF CLUB: Northgate & Associated Karate Clubs

Martial Arts are activities where safe practice is essential to help prevent injury. Children* are particularly vulnerable as they are still developing mentally and physically, so training methods need to be modified as described below. (*also includes Adults at Risk)

1. Warm Ups

All activities should first include a thorough warm up which is appropriate for the activity taking place. To help reduce the risk of injury, specific attention should be paid to those muscle groups that will be used during later activity.

2. Martial Arts involving throwing, grappling and strangling

Some examples are: Judo, Ju Jitsu and Aikido

The risks include but are not limited to: falling on unsuitable surfaces; landing on the head; damage to the joints from locks; strangulation.

Safe practice should include, but is not limited to:

- (a) Checking the matted area for suitability, particularly where the mats have been joined.
- (b) Checking that there are no hard surfaces or sharp/hard objects around the matted area.
- (c) Having an experience instructor who will ensure that children are not taught to use locks, throws or strangles which will cause injury.

3. Martial Arts involving strikes, punches and kicks

- (a) The risks include but are not limited to: concussion (brain injury) from heavy blows to the head; damage to internal organs and joints from heavy blows; injury from inappropriate stretching and other exercises.

There are some key points to consider in this section, particularly around head contact for under 16s. Please consider the following in your safe practice policy:

- To what degree, if at all, is head contact allowed? What type of head contact is permitted? (no contact or light contact under 14 years old with the head guard on)
What safeguards are there to limit the risk of head injury?
Head guard
- Is age a consideration regarding head contact? What ages should be considered? Up to 14 years old
- Is equipment a consideration when sparring or in competition? What equipment should be considered? Head guard, gum shield , hand/foot/shin pads, body protector/breast protector/groin protector
- Is the age of the participants/athletes a consideration when sparring or in competition? What ages should be considered? All ages
- Is height or weight of the participants/athletes a consideration when sparring or in competition? What heights and weights should be considered? During each competitions athletes are booked under different categories depending from height, weight, age and grade.
- What floor covering (e.g. mats) is used when sparring or in competition?
Competition mats
- What are the steps taken if head injury occurs? Dedicated first aider at the competition making decisions about the steps which should be taken if head injury occurs.
- Is appropriate medical supervision available when sparring or in competition? yes
- What considerations are taken with mixed gender sparring and competition? Most competition are female or man only.
- Is supervision of the participants/athletes considered when sparring or in competition? Mat judges and coaches supervise athletes during the sparing.

(b) Avoiding excessive stretching and exercises such as press-ups on the knuckles or hitting heavy bags; the joints of children are still developing and can be damaged by these exercises.

Above all, safe practice means having a suitably qualified and experienced instructor who will ensure that children are not exposed to the above risks and who can make a training session enjoyable whilst maintaining the discipline essential to learning a Martial Art.
